DATA SHEET neon convertor Type MINI 940 k

- Available in the following versions: *Standard, Dimmer, Flasher, Remote control*
- Compliant with standard EN 61347-2-10 for the **L.V. Directive**
- Compliant with standard EN 61000-3-2, EN 55015 3rd ed., EN 61547 for the **EMC Directive**
- **Type B** convertor in accordance with EN 61347-2-10 (protection against secondary ground fault leakage is required)
- 230v. input, with Italian or Schuko plug and a 1,5m cable.
- Output with 1m cable type **K** (as per EN 50143). Insulation in polyethylene and PVC. External diameter 4,5mm. Section 1mm²
- Certifications : Fimko, TUV, Prima R & S.

Electrical data:

Input :	Voltage	Volt 230
	Current	Ampere 0,2 maximum
	Frequency	Hertz 50/60
	Power	Watt 25
	Power factor	$\lambda > 0.95$
Output:	Voltage	Volt 499 – E – 499 rms maximum
	Nominal load current	mA 45
	Short circuit current	mA 55
	Frequency	Hertz 24.000

Performances:

- In compliance with *Flashers (0.5sec. delay at switching on)*
- Not compliant with *Dimmers*
- Suitable both for lamps loaded with argon + mercury gas as well as with 100% neon gas (lack of “bubble” effect and of mercury migration)
- Supplied with **open circuit protection, ground fault protection and protection against overloading**
- Maximum ambient temperature 40 c°
- Place 10mm far from metal surfaces

Loading: maximum one lamp. Lenght: as per the here below mentioned chart.

	d.10mm	d.12mm	d.15mm	d.18mm	d.20mm	d.25mm
Neon	mt.0,5	mt.0,6	mt.0,7	mt.0,8	mt.0,9	mt.1,0
Argon	mt.1,2	mt.1,4	mt.1,7	mt.2,0	mt.2,2	mt.2,4

	a	b	c	d	e	f	g	h	i	weight
MINI	48	31	113	124	25	14	6	1000	1500	450 g

All dimensions are in mm.

INSTALLATION GUIDELINE

- To verify that the converter is not overloaded add to the lamps to be lit a 7 K Ω (11 watt) resistor. If tripping occurs, reduce the number of lamps to feed. To check for presence of installation problems, this test shall be performed when sign is finished.
- For high voltage connections use the cable connected to the transformer with no further additions.
- The converter must be, on all its' sides, **1 cm apart** from the metal surface.
- The converters must be at least **2 cm far** from one another.
- The distance between the lamps and parts with different potential (other lamps, current conductors, parts connected to earth) shall be suitable to the voltages on site which, at the frequencies produced by the converter, can discharge easily through air and unsuitable insulating material.
- The material of the supports of the lamps must be always insulating (EN 50107)
- To comply with the *electromagnetic compatibility* directive (EMC), from the output of the converter to the feeding supply, **avoid placing the feeding cable near the neon lamps and/or the high voltage cables.**
